

AT THE END OF TRAINING THE CLINICIAN SHOULD BE ABLE TO:

- Describe the general operation and structure of the T1 monitor/module
- Explain how to admit a patient and enter patient demographic information
- Discuss screen layouts and options
- Understand basic parameter functions, such as HR, SpO₂, NIBP, etc.
- Identify alarm behavior and differentiate between alarm reset and alarm pause
- Identify departmental alarm settings
- Explain how to adjust patient specific alarms
- Outline the arrhythmia analysis process and describe basic troubleshooting techniques
- View and print current and historical patient data
- Discuss insertion/removal of T1 as a module
- Describe patient transport using the TMR handle and/or dock
- Discuss patient transfer options between and among departments
- Discharge a patient and differentiate between standby and discharge
