

AS3000 CLINICAL QUICK START GUIDE

AS3000[™] Anesthesia Delivery System

This guide does not replace the AS3000[™] Anesthesia Delivery System and Patient Monitor Operating Instructions. Consult each product's instruction manual for complete setup instructions.

- 1. Ensure all flows are OFF and the Y-piece is OPEN prior turning ON the AS3000.
- 2. Follow the ventilator's onscreen instructions to complete the START UP test.
- 3. If the Leak Test fails, eliminate the leak and retest, or power cycle and bypass the Leak Test to allow the ventilator to operate with the leak.
- 4. **Turn on the Patient Monitor and Gas Module** 15 minutes prior to the first case of the day and ensure all patient cables and interconnect cables are free from damage and are firmly connected.
- 5. **Start the ventilator** by using the knob to highlight (white) the MODE tile. Scroll to CMV, PCV, PS or SIMV and press the knob twice.
- 6. **The STANDBY screen** displays no data. See patient data in MANUAL Mode when using the bag.
- When reducing N2O flow, O² decreases proportionally to maintain the same ratio. Adjust O² first and last.
- 8. To turn OFF the volume, pressure and Apnea alarms in MANUAL mode use the knob to select the ALARM Off option.

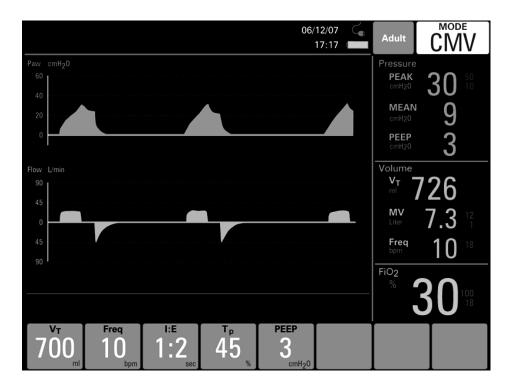

Assistance is provided by phone, Monday through Friday between 9:00am and 5:00pm EST. Contact your local representative for assistance after hours.

Please set aside time between clinical cases when calling for product assistance. Call 1-800-288-2121.

- 9. The MANUAL/AUTO key switches back and forth between the bag and the ventilator.
- 10. **Confirm the waste gas scavenger** is connected and its (red) float is between minimum and maximum.
- 11. **ADULT/CHILD size** can only be changed while in the STANDBY mode.
- 12. **To calibrate the O² sensor**, press MENU. Use the knob to navigate to the CALIBRATE tab (top of screen). Follow on screen instructions exposing sensor to room air for 3 minutes. Always select and enter 'DONE' before returning to the Normal Screen.
