# BeneVision CMS Mobile App

CENTRAL MONITORING SYSTEM MOBILE APP

Features and Benefits

- View real-time physiological data plus historical events for current patients across the hospital

- Optional Clinician Authentication enables secure data review by clinicians via role-based, hospital-assigned user rights

- Access critical data for multiple patients simultaneously

- View patients across multiple BeneVision DMS servers

- Provides visual indication of alarm conditions

- Shares the same user interface as BeneVision DMS so clinicians are able to quickly and easily navigate the software

- Requires a hospital-installed Mobile Server which provides patient data to the Mobile App, acting as an interface to the BeneVision DMS

- Viewing location can be virtually anywhere, inside or outside the facility, once on or connected to the hospital network

Critical data at your fingertips

The BeneVision DMS platform extends data access far beyond the traditional central monitoring station. Using the **BeneVision CMS Mobile App** in combination with a hospital-installed Mobile Server, authorized users are able to view real-time patient data on an iOS or Android-based smart phone or tablet. Clincians simply launch the installed BeneVision Mobile App on their phone to observe and manage a patient's condition from virtually anywhere, once connected to the hospital network. With this best-in-class viewing tool, access to data, continuity of care, and clinical collaboration can be realized on a whole new level.
